# Border Control for Meat, Poultry and Egg Products for the U.S.

Presented by: Office of International Affairs, Import Inspection Division

---

# Introduction

## Food Safety and Inspection Service (FSIS)

- Ensures the nation's supply of meat, poultry and egg products is safe, wholesome, and correctly labeled and packaged
- Responsible for public health issues concerning meat, poultry and egg products

[www.fsis.usda.gov](http://www.fsis.usda.gov)

# Introduction

## Animal and Plant Health Inspection Service (APHIS)

- Responsible for controlling animal health issues
- Restricts some products from entering the United States because of animal disease conditions in the country of origin
- Contact APHIS Veterinary Services, National Center for Import and Export

[www.aphis.usda.gov/vs/ncie/](http://www.aphis.usda.gov/vs/ncie/)

# Introduction

## Food and Drug Administration (FDA)

- FDA is responsible for seafood, denatured animal products not intended for human food and meat and poultry products not amenable to FSIS
- Examples of non-amenable products subject to the requirements of the Federal Food, Drug and Cosmetic act are as follows:
  - ❑ Certain products containing meat or poultry in small amounts (less than or equal to 3%)
  - ❑ Species under Voluntary Inspection
  - ❑ Reference 9 CFR 381.15

U.S. Food and Drug Administration

[www.fda.gov](http://www.fda.gov)

# Entry into the United States

- Meat, poultry and egg products entering the U.S. are usually transported in the following ways:
  - ❑ Container Vessel
  - ❑ Bulk Vessel
  - ❑ Air Freight
  - ❑ Truck
  - ❑ Rail Car

# Entry Into the United States

- Carriers destined for a US port must transmit the bill of lading data for all goods on board prior to lading at the foreign port
- Importer Security Filing (10+2 Rule): Importer is required to submit 10 additional data elements regarding shipments destined to the US prior to the product being laden on the vessel; carriers are required to submit 2 additional data elements within 48 hours after departure

[www.cbp.gov](http://www.cbp.gov)

# Entry Into the United States

- Importers must file an entry for shipments being imported into the U.S.
- CBP uses these data elements to assess shipments and determine their course of action, i.e. exam, release, etc.

[www.cbp.gov](http://www.cbp.gov)

# Entry Into the United States

- Importer of record files entry with U.S. Customs and Border Protection (CBP)
- CBP completes agriculture checks for restricted products (per APHIS requirements)(animal health requirements)
- Releases shipment **to FSIS** for reinspection (public health requirements)

[www.cbp.gov](http://www.cbp.gov)

# Entry Into the United States

- Importers are required to post a “bond”, usually an amount to cover the value of the shipment plus duties and fees
- Shipments remain under bond and subject to re-delivery by CBP until FSIS releases the shipment

[www.cbp.gov](http://www.cbp.gov)

---

# FSIS Import Reinspection

- After an incoming shipment has met U.S. Customs & Border Protection and APHIS requirements, the shipment must be re-inspected at an FSIS approved import inspection facility
- About 65 FSIS Inspectors carry out re-inspection at approximately 125 FSIS approved import facilities

# FSIS Control of Imported Product

FSIS must take enforcement action when:

- Importers fail to present eligible meat, poultry, and egg products for inspection after their release by CBP
- When imported product shipments arrive at U.S. ports of entry from ineligible sources
- When imported product fails inspection and is refused entry
- When uninspected or ineligible imported product is discovered in domestic commerce

# FSIS Import Surveillance Liaison Officers

## ISLO

- Currently 20 ISLO positions at key POE.
- Bridge the gap between entry into the United States and reinspection performed by FSIS import inspection personnel.
- Increase awareness of FSIS role in import inspection procedures (Industry as well as government officials.)

---

# ISLO Surveillance Activities

- Conduct surveillance/investigation activities at facilities that handle meat, poultry and egg products
- Monitor product for tampering that would threaten imported food supply
- Assure that product in commerce meets U.S. regulatory requirements

# ISLO Liaison Activities

- Maintain effective and continuous liaison with other Federal agencies including, but not limited to:
  - ❑ Customs and Border Protection (DHS/CBP)
  - ❑ Food and Drug Administration (FDA)
  - ❑ APHIS
  - ❑ Other FSIS Program Areas
    - ❑ Office of Program Evaluation Enforcement and Review (OPEER)
    - ❑ Office of Field Operations (OFO)
    - ❑ Office of Data Integration and Food Protection (ODIFP)

---

# Public Health Information System (PHIS)

- Enables interface with U.S. Customs and Border Protection's Automated Commercial Environment (ACE) system
- Business-to-government exchange of shipment data
- Provides FSIS Advance Notice when Customs entry is filed

# Public Health Information System (PHIS)

- Will replace paper application for inspection (Form 9540-1)
- “Single-window” reduces burden on industry
  - Uses existing data collected by CBP
  - Incorporates FSIS specific data into the CBP standard data set (UN/CEFACT and WCO compliant)

# Public Health Information System (PHIS)

- System is able to confirm eligibility of country
  - Public health and animal health regulations
- Applies different frequencies of reinspection for each type of inspection (TOI) performed
- Has the ability to increase/decrease reinspection of products by country or establishment
  - Performance-based
  - Compliance history of country and establishment

# Public Health Information System (PHIS)

- Enables Interface with foreign government electronic certification systems
  - Government-to-government exchange of certification data
  - Pre-populates shipment data received from industry through CBP (ACE), enhancing controls and reducing fraud
- Enables Shipment Tracking
  - Amenable shipments “fail-to-present” for FSIS inspection – warning to importer
  - Automates refused entry notification to importer

# FSIS Control of Imported Products

- FSIS import personnel query ACE and target suspicious consignments to help identify:
  - Potential ineligible or smuggled shipments
  - Shipments that fail to present for import reinspection prior to entering commerce

# FSIS Control of Imported Products

Through the ACE Portal, FSIS secures real-time access to shipment entry summary data:

- ❑ Customs Entry Number
- ❑ Entry Line
- ❑ Entry Date
- ❑ Entry Type
- ❑ Entry Type Description
- ❑ Unit of Measure and Quantity
- ❑ Port-of-Entry code
- ❑ Port-of-Entry name
- ❑ Country of Origin
- ❑ HTS Code
- ❑ HTS Description
- ❑ Importer Name
- ❑ Importer of Record number
- ❑ Filer Name
- ❑ Filer Code
- ❑ Consignee Name

---

# FSIS Control of Imported Products

Using ACE entry data, FSIS can determine:

- ❑ If shipments have entered from ineligible countries or establishments
- ❑ Ports-of-entry of noncompliant shipments
- ❑ Importer of Record and Consignee for noncompliant shipments

# Import Processes

- Application and product eligibility validation
- Monitor shipments
- Receive lots
- Perform reinspection
- Perform laboratory TOIs
- Refused entry
- Shipment disposition
- Import library
  - Maintain foreign country and foreign establishment profile

---

# Public Health Information System - e-Cert - Exports

---

**USDA** United States Department of Agriculture  
Food Safety and Inspection Service

# Functional Area Overview

## **Domestic Inspection**

(replace PBIS, STEPS, RIS, eADRS, PREP-Sampling )

## **Imports**

(replace AIIIS)

## **Exports Certification**

(new)

## **Predictive Analytics**

(new)

# Export Functions

- Monitors all establishments and Import/Export data
- Ensures export certificates properly reflect a foreign country's requirements
- Enables automated export functions for industry
- Provides reference information on export shipments
- Enhances FSIS' certification process

# Establishment Responsibility

- Application for Export
  - FSIS Form 9080-3
- Application for Export Certificate
  - FSIS Form 9060-6
- Product Lists for all products exported
- Maintain Address Book

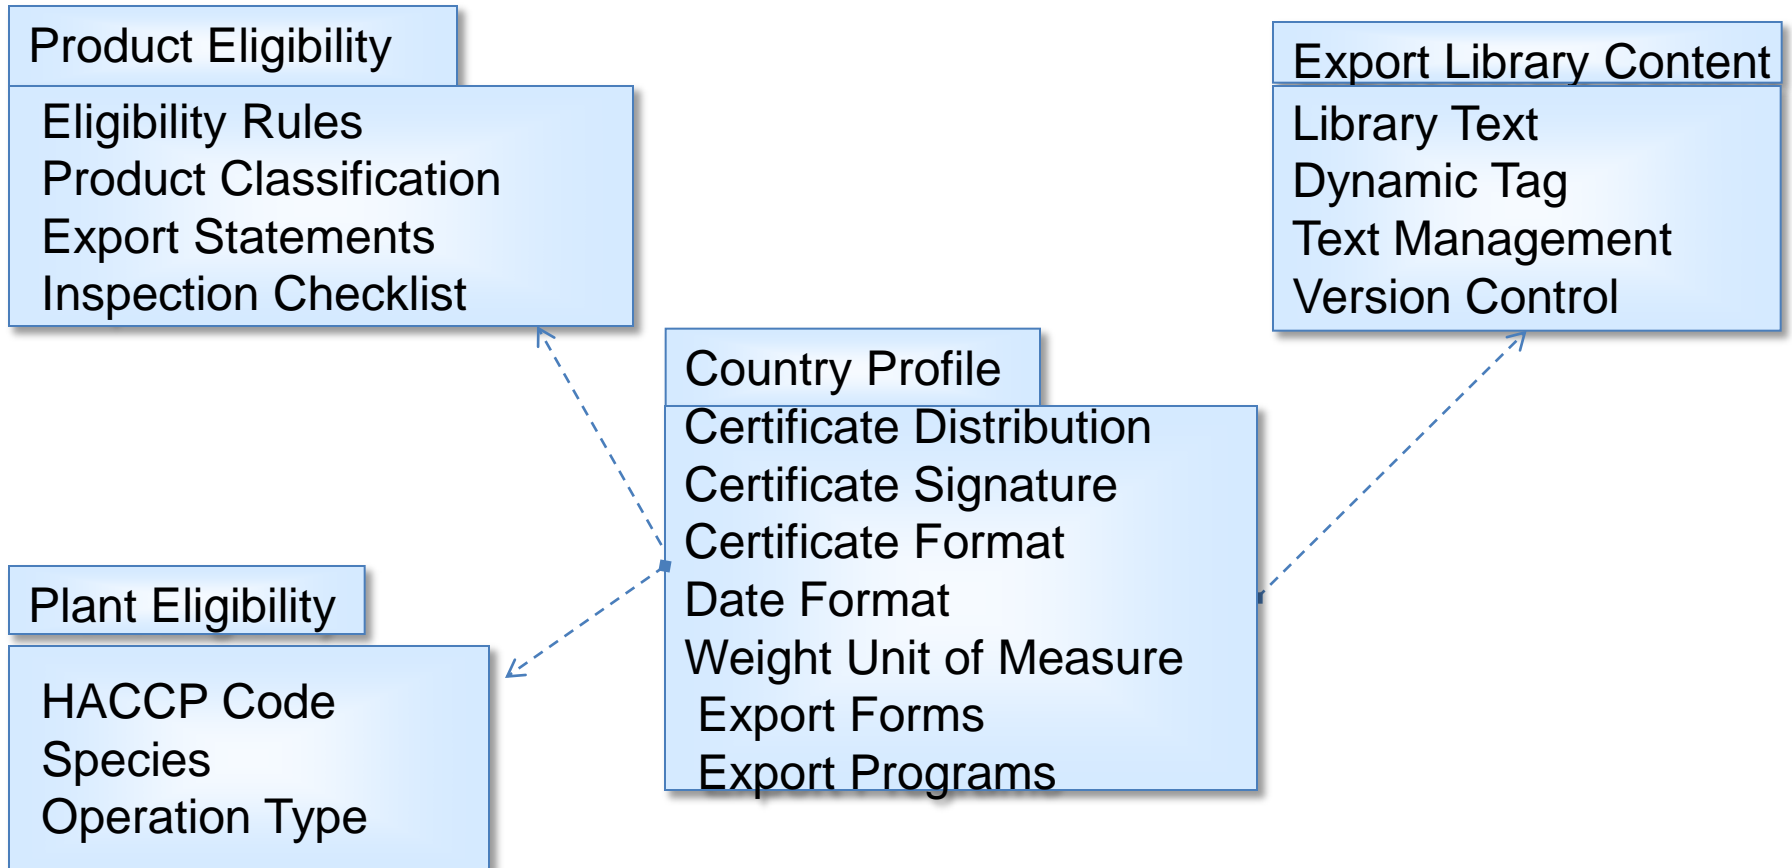

# FSIS Responsibility

- Verify Correct Export Application
- Verify Importing Country Requirements
- Verify Re-inspection of Product

# Export Library in PHIS

# Export Certificates

- Paper certificates printed on security paper
  - Unique serial number on each page in addition to the certificate number
  - Watermark that changes location on each page
  - Solvent sensitive coating and pantograph background
  - The word **COPY** will appear on the paper when photocopied

## ■ Electronic Trade Document Exchange Certificate Image

- ❑ Web-based alternative to paper certificates
- ❑ Receives official certificates through internet
- ❑ Facilitates export of regulated products
- ❑ Validates the identity of each document
- ❑ Provides greater security

- Certificate data exchange by secure internet protocols for traded products
- Standards for eCert were developed and published by the United Nations' Centre for Trade Facilitation and Electronic Business (UN/CEFACT). It provides a standard for the machine-to-machine exchange of electronic certificate information.

---
