- .....
- .....
- .....
- (b) Type and number of packages: .....
- .....
- (c) Net weight of consignment: .....
- (d) Identification marks: .....
- .....
- (e) Seal number(s): .....
- (f) Date of Manufacture:.....

**II. ORIGIN OF PRODUCTS**

- (a) Name and address of exporter: .....
- .....
- .....
- (b) Name, address and official approval number of plant of production: .....
- .....
- .....

**III. DESTINATION OF PRODUCTS**

- (a) The product will be despatched from: UNITED KINGDOM  
to: .....  
(country and place of destination)
- (b) Name and address of consignee: .....
- .....
- .....

(c) Means of transportation: .....

**IV. HEALTH INFORMATION**

I, the undersigned Official Veterinarian, certify that:

1. the products described at paragraph I bear oval marks which demonstrate that they are fit for human consumption and were produced in accordance with European Union legislation, in an establishment approved by the competent authority of the United Kingdom for intra-EU trade;
2. the products do not contain milk which originates from holdings on which an epizootic Office International des Epizooties (OIE) Listed disease to which the species of origin is susceptible has been confirmed at the time of collection of the milk;
3. United Kingdom law prohibits the sale or supply of milk from cows affected or suspected of being affected with Bovine Spongiform Encephalopathy;
4. the feeding of ruminant protein to ruminants has been prohibited in the Great Britain since July 1988 and in Northern Ireland since January 1989;
5. the products have undergone, or contain milk which has undergone, treatment in accordance with European Union legislation on the health rules on the production of milk and milk products, and meet the microbiological criteria laid down therein, including freedom from salmonella and other pathogenic organisms associated with milk;
6. the product was not contaminated by pathogens of animal contagious diseases from the raw material, during manufacturing, processing, transportation and storage; all the necessary precautions were taken after treatment to prevent contamination of the products;
7. the United Kingdom has a comprehensive programme in place to monitor radioactivity in food and the environment. The results demonstrates that even the most exposed members of the UK public received radiation doses from consumption of local food and exposure to environmental radioactivity (due to discharges and direct radiation) that were below the statutory EU annual dose limit to members of the public of 1 millisievert per year from artificially-produced radionuclides as set in the Council Directive 96/29/Euratom of 13 May 1996.
